

Protection, Monitoring and Control Components for Low Voltage Equipment

SELECTION GUIDE: INTERNATIONAL EDITION

[Telehouse Data Centre, London. 199 TemPower 2 ACBs, 423 TemBreak 2 MCCBs.]

Terasaki supply circuit breakers which protect people and equipment from electrical faults. Safety and protection are the prime purposes of our products.

We supply products to switchboard builders, shipbuilders and equipment manufacturers. We are global market leaders for switchgear in the marine market. Terasaki have worldwide export experience and the necessary professional skills to support your business.

[Terasaki is the world leader for circuit breakers and switchgear in the marine market.]

R&D

We are meeting the needs of customers with a complete system of development, design and manufacture based on the know-how we have accumulated with electrics, electronics and control over the decades since our founding.

We have DEKRA (formerly KEMA) -approved test systems and two generators in house to carry out the necessary development tests.

Terasaki realises optimised products through 3D CAD, software development, mould and sheet metal design, structural design and resin flow analysis.

 1985

HISTORY

 1963

PATENTED!
Successfully developed the world's first current-limiting breaker

 1970

Established our first overseas subsidiary in the UK

 1923

Terasaki Electric Works founded in Konohana-ku Osaka

CAPABILITIES

Safety & Reliability

High MTBF; Low MTRR; temperature monitoring, double control circuits

Approvals

ISO 9001; ISO 14001; OHSAS 18001; Lloyds; BV; GL; GOST; SABS; DEKRA (KEMA); ASTA; IEC 60947-2; IEC 61439; IEC 60898

Asset Management

Retrofits; Preventative Maintenance; Lifecycle Management

Special Protection Solutions

DC; PV; UPS; 1000V AC; Integrated residual protection; 100kA and above

PRODUCTS & SERVICES

2000

PATENTED!
Double contacts, double opening coils, double closing coils are unique to the TemPower 2 ACB

2007

PATENTED! Residual current protection is an integrated feature of the TemBreak 2 CBR – the first in the world to meet IEC 60947-2, Annex B

PATENTED!
The TemTrip relay was the first to offer true RMS protection

Air Circuit Breakers

Moulded Case Circuit Breakers

Din Modular Protection

Automatic Transfer Controller

SUSTAINABILITY

It makes good environmental sense to install a product with a long life expectancy. If you install a Terasaki circuit breaker you can expect it to stay in service for a high number of electrical and mechanical operations.

The modular design of our Terasaki breakers allows component parts and accessories to be easily disassembled and separately disposed of. Moulded parts of MCCBs do not contain any embedded metal parts and are clearly marked to allow future identification for easy recycling.

Components with low weight and volume make life easy for users, but high performance from smaller products also means less material used and less waste produced.

TERASAKI PROFILE

Mr. Taizo Terasaki
President

Mr. Masakazu Fujita
Chairman

“We want to meet the needs of more customers around the world in our circuit breaker and lifecycle service businesses.”

Mr. Taizo Terasaki, President

Foundation:

October 1, 1923

Established:

April 1, 1980

Capital:

1236640 thousands of yen

Chairman:

Masakazu Fujita

President:

Taizo Terasaki

Number of Employees:

1914 (consolidated) 593 (non-consolidated)

Consolidated net sales:

36975 million yen

Non-consolidated net sales:

24680 million yen

Consolidated subsidiaries:

5 domestics and 8 overseas

Non-consolidated subsidiaries:

1 domestic and 2 overseas

Affiliated companies:

2 domestic

Listing:

Tokyo Stock Exchange (Jasdaq)
[Security code 6637]

Mr. Yasuhiko Terasaki
Late chairman of the company

Mr. Yasutaro Terasaki
Founder of the company

Moulded Case Circuit Breakers

5 Reasons to Use TemBreak 2 MCCBs

1. Electronic Versions with integrated monitoring and communication

Data can be sent to integrated display, local display and Modbus network simultaneously.

*See T2ED on page 22

4. Circuit breaker with integral residual current protection (CBRs) [see page 13]

We offer integrated protection from earth leakage faults, overloads and short-circuits in one device.

2. Smaller 1000A MCCB

It is only 273mm high and 210mm wide - same size as 800A MCCB

Previous 1000A MCCB New 1000A MCCB

5. Direct opening action

The robust mechanism ensures that the force you apply to the toggle is transmitted directly to the contacts. Direct opening action is recommended by IEC 60204-1, Safety of Machinery: Electrical Equipment for Machinery

3. Superior temperature performance

We offer MCCBs for use up to 50°C without derating from 20A to 1600A

CUSTOMER ENDORSEMENT

“Terasaki Electric have supplied circuit breakers for a number of high resilience projects that we have designed, through the selected switchgear suppliers.

They have always provided excellent support to our projects and we have found them to be a good company to partner with on component supply; the selected products provided the ideal solution for our mission critical environments.

We have no hesitation in including Terasaki Electric devices in our designs.”

Karl Luck, WSP (Engineering Consultancy, UK)

Residual current protection settings:
30mA, 100mA, 300mA, 500mA,
1000mA and 3000mA.

What is a CBR?

Integral CBR – “circuit breakers... which incorporate the residual current function as an integrated feature”:

IEC 60947-2 Annex B.

In other words a CBR is a moulded-case circuit breaker equivalent of a DIN-modular RCBO – it includes overload, short-circuit and residual current protection inside a single device.

How can a CBR give me a cost advantage?

When CBR is used as the supply connection device and is set to 30 mA, RCBOs are not required on outgoing load circuits for electric shock protection (unless discrimination is required).

The residual current protection provided by the supply connection device covers all load circuits. MCBs may be used to protect load circuits and the installation will still meet the requirements for electric shock protection “RCD”

Moulded Case Circuit Breakers for Special Applications

Circuit Breakers with $I_{cu}=70kA$ at 690V AC

High performance at the distribution voltages found in marine applications. Terasaki supply more switchgear to ships than any other manufacturer worldwide.

Circuit Breakers for 1000V AC

1000V AC is used as a distribution voltage where long cables are necessary. This product range is ideal for mines and railways.

Circuit Breakers and Switch Disconnectors up to 1000V DC

We have developed special version of MCCBs to protect systems with DC voltages above 250V. Our range extends to 1000V DC and are often used to protect solar energy plants.

Switch-Disconnectors

Every frame size includes a switch-disconnector version without integral protection. Internal and external accessories are compatible with switch-disconnector versions.

Low Instantaneous

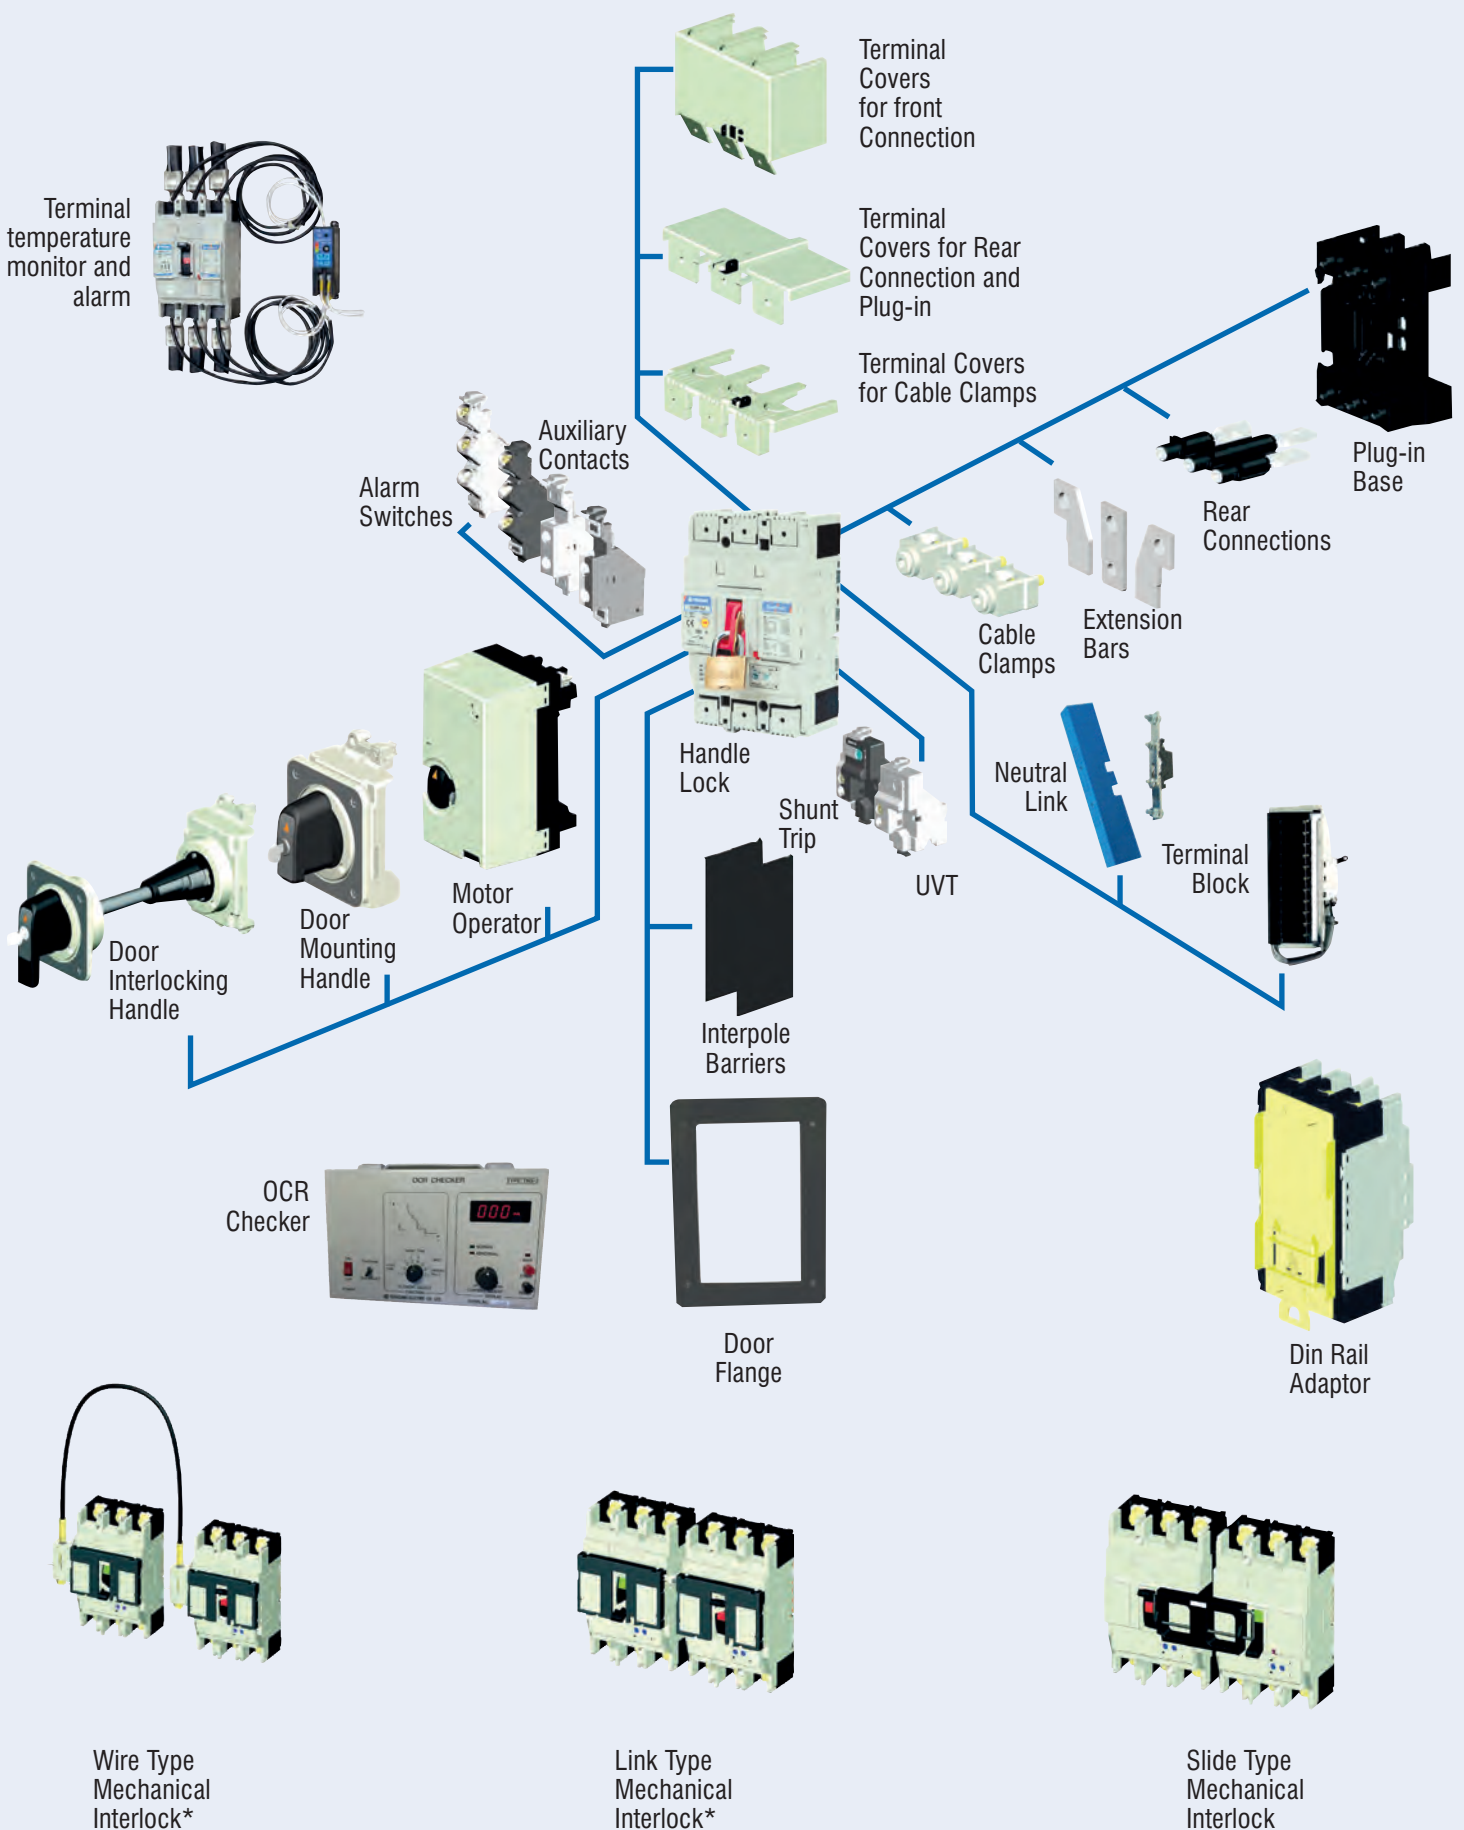

The available short-circuit output of generators is lower than typical transformers. Sometimes MCCBs with sensitive instantaneous protection are necessary for use with generators.

MCCB Accessories

*Compatible with motor operator or either handle.

5 Reasons to use TemPower 2 ACBs

1. Patented High Performance 5000A and 6300A ACBs

The air circuit breaker interrupts the current at two points on the line side while dissipating heat from contacts or terminals by efficient air convection through pressure valve.

Efficient air convection through a pressure valve

2. Double opening and closing coils

Double Opening and Closing Coils provides extended control system redundancy to an ACB. Double coils allow designers to implement back-up tripping and closing systems. It provides the end-user with ultimate reliability on critical UPS circuits connected to critical loads.

3. Fast interruption by unique "Double Break" system*

The unique "DoubleBreak" main contact system ensures extremely fast interruption of short circuit currents and substantially reduces main contact wear. The internally symmetrical "DoubleBreak" structure means the moving contact is isolated from the supply voltage even when the ACB is reverse connected. TemPower 2 ACBs up to 4000A use DoubleBreak technology.

4. Easy Maintenance

The unique design of TemPower 2 incorporates its isolating clusters and main contacts on the ACB body. The main contacts and isolating clusters may be maintained without having to isolate the switchboard.

5. Replacement of the main contacts*

The fixed and moving contacts can easily be replaced in the field, thus prolonging the life on the circuit breaker. Changing each pole takes around 15 minutes.

*Not available on AR6

CUSTOMER ENDORSEMENT

"The performance of Terasaki's ACBs was proven on site when a main busbar failed in one of the switchrooms. The ACB was reclosed on the short-circuit fault twice during fault diagnosis and is still in operation following a service by Terasaki."

Andy Oswald, BAA
(Airport Operating Company, UK)

Phase Rotation Protection
Under/Over Frequency
Earth Leakage
Harmonic Monitoring
Generator Protection Curves
IDMT Protection Curves
Field Test

Non-Automatic (switch-disconnector) versions without protection are available in every frame size.

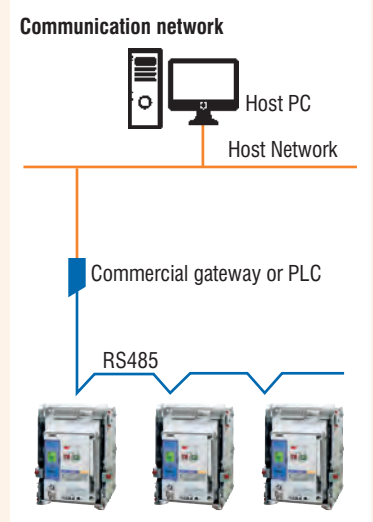

TemPower 2 is available with a choice of flexible IDMT protection curves to assist in selectivity applications.

- S.I. Standard Inverse
- V.I. Very Inverse
- E.I. Extremely Inverse

All these curves are user definable and comply with IEC 60255-3.

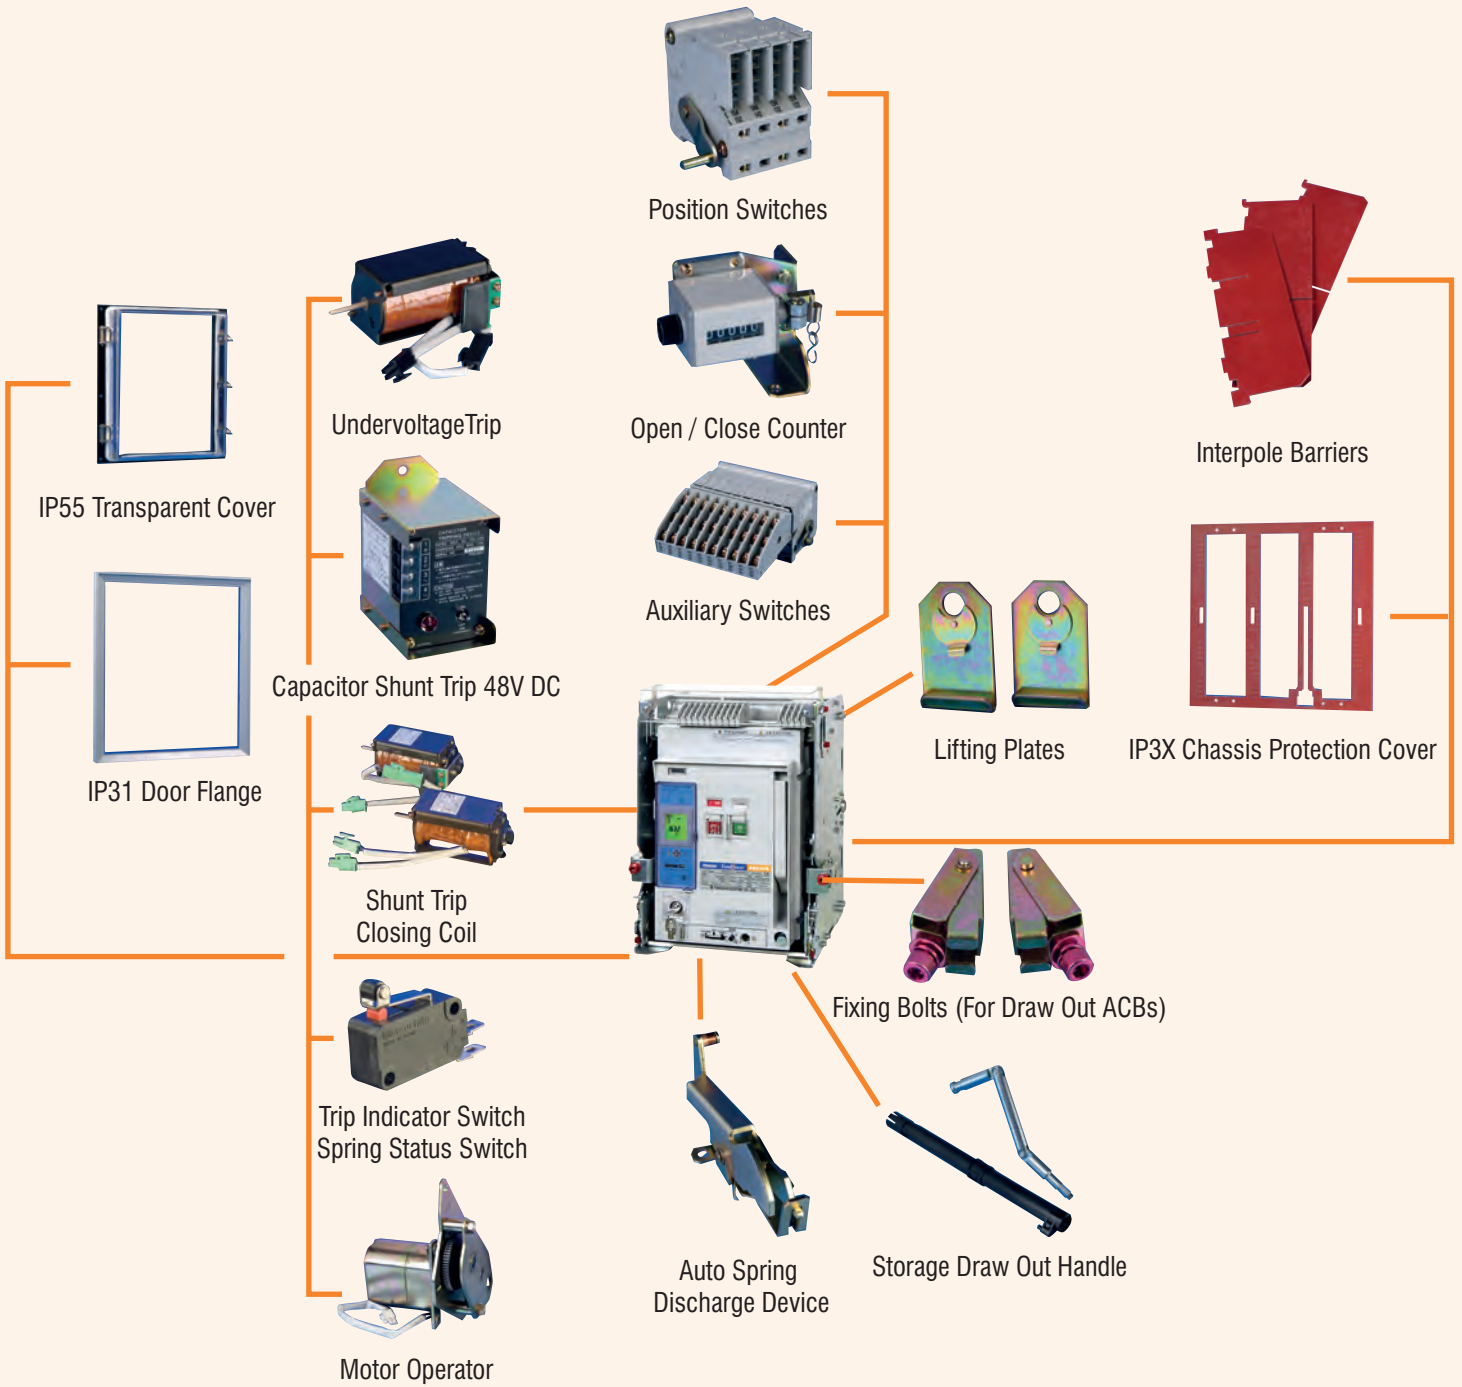

TemPower 2 may be equipped with an optional communication interface unit that allows data exchange with a host PC via a Modbus open network. Data communicated includes measurements, fault log, maintenance information, ON/OFF status, settings and control (ON/OFF/RESET) signals.

Retrofit Concept

Retrofitting refers to the addition of new technology to older systems. Retrofit ACBs can replace ageing, unsafe switches and circuit breakers.

Top 5 reasons to use Retrofit

1. Improve safety and functionality

Modern circuit breakers offer safer interlocks, remote switching and circuit monitoring.

2. Optimise existing plant

Static components in a switchboard (the steelwork and busbar system) can be retained. Only the functional, moving parts (the circuit breakers) are replaced. Retrofitting is typically 80% cheaper than switchboard replacement with minimum downtime.

3. Guaranteed spares availability

Terasaki guarantee spare parts availability for at least 10 years after the withdrawal from sale of a circuit breaker.

4. Modernise the protection system

Old protection relays can be removed and replaced with modern microprocessor protection which is integral to the ACB. It is then easier to interface the ACB with automatic plc controls.

5. Reduce arc flash hazard

Modern ACBs clear short-circuits much faster than older types. This means that the incident arc energy is correspondingly lower.

The Perfect Fit

Mounting brackets are designed and manufactured from site measurements to ensure a perfect mechanical interface. Where possible our designs pick up original switchboard fitting locations, thereby avoiding cutting and drilling on site.

Reliable Connection

Copperwork interfaces are designed using short-circuit evaluation software. Electrical connection busbars and supports can be tested to IEC 61439 (busbar withstand test).

Full Functionality

Withdrawable functionality and safety interlocks of original devices can be retained and improved. Fixed pattern devices can even be replaced with withdrawable devices.

Terasaki's Retrofit Services

We prefer to conduct a site survey for every retrofit project - even if the breaker to be replaced is already on our design database. This ensures that the installation is as quick as possible, with minimum disruption to the client's supply.

Mechanical and electrical interfaces are modelled using state-of-the-art 3-D CAD.

We can arrange for busbar interface connections to the switchboard to be independently short-circuit tested. This provides reassurance to the client that the fault capability of the retrofitted circuit breakers and connections will equal or exceed that of the original system.

Manufacture, assembly and routine testing is carried out at Terasaki's facility in Glasgow, Scotland. The factory and processes are certified to the ISO 9001 quality management standard.

Our engineers are renowned for fast and efficient working. Some of our Retrofit designs can be installed without a shutdown. Where this is not possible, our team will ensure that disruption is minimised.

We design retrofit ACBs on request. If you are interested in a brand which is not shown below we would be happy to examine it. New designs are continually added to our portfolio. Check the latest list on the Terasaki website: www.terasaki.co.uk

ASTA tested to IEC 61439 for short-circuit withstand (Icw)
GEC MPact
Ellison
English Electric

Low voltage arc hazard reduction

1. Remove switching using umbilical cord controller
2. Faster opening time reduces incident arc energy. TemPower 2 ACB can be set to open a short-circuit in less than 30 milliseconds (typically at least twice as fast as the device it will replace).

Modern protection

The AGR Protection relay can replace the functions of several devices in an existing switchboard to provide:

- restricted earth fault protection
- overcurrent protection
- data communication to BMS or SCADA
- plc control

Monitoring and Communication: T2ED

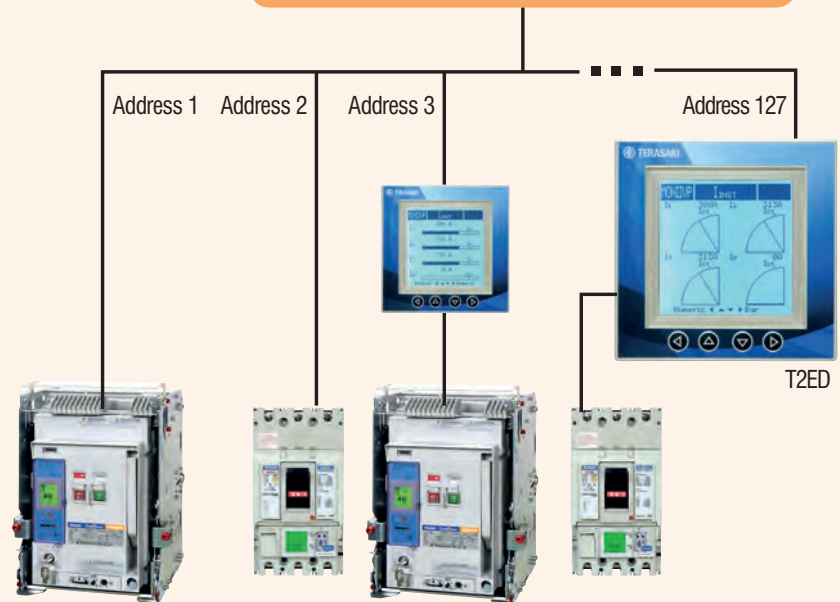

T2ED is a new Terasaki external display for TemPower 2 ACBs and TemBreak 2 MCCBs. It displays circuit measurements and information about the installed breaker in an easily readable way. T2ED may be used as a stand-alone local display. T2ED is also able to transfer all this information directly to a Modbus network.

Special Features:

View circuit values and breakers data safely from the outside

- Easy direct connection from breaker to T2ED (no need for communication module)
- Easy direct connection from T2ED to Modbus (no need for communication module)
- Analogue, numerical and bar graph views

Host Network / Commercial Gateway

Technical Characteristics:

- Rated voltage: DC24V (Applicable range of voltage: DC18 to DC 31V)
- Consumption (at DC24V): 50mA
- Dimensions (96 x 96 x 50) mm
- Serial Interface: RS485
- Protocol: Modbus-RTU
- Transmission method: Two-wire half duplex

Multi-Protection Relay: TemTrip 2

TemTrip2 is a multi-protection relay for medium or low voltage circuit breakers that is capable of indicating via LEDs that the load current is picked up or the breaker trips open and showing various information including the phase current, line voltage and fault current on the LCD.

The relay is available in three types: for generator protection, feeder circuit protection and transformer protection.

		PRR-1H-G	PRR-1H-F	PRR-1H-T
		Generator protection	Feeder circuit	Transformer protection
Adjustable long time-delay trip	LT	○	○	○
Adjustable short time-delay trip	ST	○	○	○
Adjustable instantaneous trip	INST	○	○	○
Adjustable undervoltage trip	UV(27)	○	△	—
Adjustable overvoltage trip	OV(59)	○	△	—
Adjustable reverse power trip	RP(67R)	○	—	—
Adjustable ground fault trip	Overvoltage ground OVGR(64)	○	○	○
	Directional ground DGR(67G)	○	○	○
Ratio differential trip	DIFF(87G)	○	—	—
	(87T)	—	—	○
Pre-trip alarm	(PTA)	○	○	○
	PTA2	○	—	—

○ Standard △ Optional

Special Features:

- Multi-protection
- Ground fault detection via zero-phase voltage
- Directional ground fault detection
- Ratio differential characteristic
- Reverse power trip
- Readout of trip/ alarm cause
- Internal clock
- Self-diagnostic

TemContact 2 Contactors

TemContact 2 is a range of magnetic contactors and thermal overload relays. Current ratings from 6A to 800A are available in 9 frame sizes and in 3 or 4 pole versions.

TemContact 2 has upgraded insulation voltage (increased from 690 to 1000V AC) impulse withstand voltage (increased from 6 to 8kV) in contactors over 40A.

Optional Accessories:

- Auxiliary contacts
- Surge absorption unit
- Reversing connection kit
- Mechanical interlock
- Safety cover for front of mechanism
- Overload relays
- Remote mounting kit for overload relay
- Pre-loading resistors for capacitor switching
- Mechanical latch
- Remote reset device for overload relays

TemContact 2 Manual Motor Starters

TemContact 2 Manual Motor Starters have integrated short-circuit and overload protection for motors of up to 45kW at 400V AC.

There are three frame sizes, each with three versions which cover the range:

- TMS32S, TMS63S, TMS100S – standard short-circuit performance
- TMS32H, TMS63H, TMS100H – high short-circuit performance
- TMS32HI, TMS63HI, TMS100HI – high short-circuit performance, without overload protection

Optional Accessories:

- Auxiliary switches for front- and side-mounting
- Alarm switches
- Shunt trip
- Undervoltage Trip
- Direct connection adapter for TemContact 2 contactors up to 100A

Safety and protection are the prime purposes of Terasaki products. Our range of DIN modular Protection products covers ratings from 0.5A to 125A and includes:

- Circuit breakers for overload and short-circuit protection,
- Residual current devices for the prevention of electric shock and fires,
- Circuit breakers combining overload, short-circuit and residual current protection.

With more than 500 items in the range, there is a solution for most applications.

Accessories

- A** Auxiliary contact 1NO, 1NC. 6A, 230V AC. Not suitable for TD3RCCB
- B** Alarm contact, 1NO, 1NC. 6A, 230V AC. Not suitable for TD3RCCB
- C** RCCB switch. Combined auxiliary contact (1NO, 1NC, 6A, 230V AC) + Alarm contact (1NO, 1NC, 6A, 230V AC)
- D** Shunt trip. RCCB switch (C) must be fitted before fitting the shunt trip to the TD3RCCB
- E** Undervoltage trip. RCCB switch (C) must be fitted before fitting the shunt trip to the TD3RCCB
- F** Overvoltage trip. Rated voltage, U_n , 230V AC. Opens the circuit breaker if supply voltage exceeds 280V AC. RCCB switch (C) must be fitted before fitting the shunt trip to the TD3RCCB
- G** Padlock. Suitable for TD3 M06, M10, XA (open and closed) and for TD31P1M (in open position only)
- H** Residual current block for TD3 M06 and M10
- I** Rotary handle for TD3 ICP

Automatic Transfer Controller

TemTransfer 2 Automatic Changeover Controller for TemPower 2 ACBs, TemBreak 2 MCCBs and TemContact 2 Contactors

TemTransfer 2 is fully configurable Automatic Changeover Controller (ACC) for use in standby power applications. The module will monitor the voltage and frequency of the incoming AC mains (utility) supply and in the event of a failure will issue a start command to the generator control system.

The controller (ACC) is designed to monitor the incoming AC mains supply (1 or 3 phases) for under/over voltage and under/over frequency. Should any of the parameters fall out of limit, the module will issue a command to the generating set controller. Once the generator set is available and producing an output within limits, TemTransfer 2 will control the circuit breaker or contactor and switch the load from the mains (utility) to the generating set.

When the mains (utility) supply returns to within limits, the module will command a return to the mains (utility) supply and shut down the generator after a suitable cooling run. Various timing sequences are available to prevent nuisance starting unnecessary supply breaks.

TemTransfer 2 Product Features

TemTransfer 2's back-lit LCD shows system status and indicates any system warnings via a 4 line text display. Red and green LEDs indicate the operational status of the network. The module can be easily configured by using TemTransfer 2 Configuration Suite PC Software, via an interface kit (optional).

- Back-lit LCD with 4 line text display
- Real time clock
- PC / Front panel
- Volt-free relays
- Configurable timers
- 5 configurable outputs
- 10 configurable outputs
- Event log
- Auto start inhibit
- Load inhibit

Supporting many different topologies, configurable timers, volt-free digital inputs and outputs make the TemTransfer 2 controller a fully flexible solution to suit a wide variety of applications.
